In sowing Snapdragon Seed always bear in mind that failure in germination usually results either from covering the seeds too thickly with soil or allowing the flats to dry out while germination is under way, or not applying sufficient shade up to time the seedlings appear. For winter crop the seed should be sown in June and measures should be taken to prevent damping off. Experimental tests have shown that on an average the most profitable spacing on an early crop is 8x8 inches. The closer the planting the smaller number of stems per plant and the shorter the stems. On a farther planting the cut per square foot is considerably less and the stems only a small percentage longer. Spring plantings, however, can be spaced closer. Grow in temperature about 45 to 48 degrees at night, 60 degrees during the day.

CALENDULA

Calendula are easily grown in a cool house with plenty of air. In fall, leave the ventilators wide open at all times if possible. A midwinter temperature of 45 degrees at night is best. If grown cool in a good soil you will get good hardy plants. The reason flowering plants sometimes come single is due to check in growth, such as poor soil, lack of water, or weakened through aphid. Sow seed first week in August for end of December or January crop. One ounce will produce about 2500 plants.

ANNUAL LARKSPUR

An Important Cut Flower Crop for Both Indoors and Outdoors

This beautiful hardy annual has been greatly improved in recent years with a wealth of new colors—longer flowering spikes and full double florets. We are listing the best and most up-to-date varieties.

Annual Larkspur is half hardy. In our latitude an outdoor fall sowing usually winters over when well started. This first outdoor planting should be followed by another sown as early as possible in the spring. Larkspur seed germinates poorly in a high summer temperature, and we do not recommend sowing during July and August.

TALL BRANCHING DOUBLE STOCK FLOWERED, 4 Feet

The tall double stock-flowered are best suited for outdoor planting. Seed sown latter part of September usually winters over well in our latitude.

SELECTED PETUNIAS

Good Petunias are becoming more in demand each year, the medium and dwarf varieties for bedding, and the Fringed and Double as a pot plant for Mother's Day Sales.

To grow good Petunias you must have rich soil. Before sowing the seed we recommend treating the soil with hot water to kill all fungi and weed seed in the soil.

Our Petunia seeds are of the finest quality, grown by the best growers in California, from selected plants, and are hand pollinated: no matter how careful the selection, you sometimes will find a few plants which revert to the old type; these usually bloom first. This is a natural habit of Petunias.

All-Double Dwarf

These plants are remarkably uniform in habit, producing a wonderful assortment of brilliant and fancy colorings. They produce very large, fully doubled flowers. As they seldom grow more than 10 inches in height, they are very suitable for pot plant sales.

Amaranth Red. A strong outstanding red.

Brilliancy. Of uniform growth and doubleness. A brighter rose than the popular World Beauty and the white variegation which often appears on the latter has been eliminated.

Gaiety. Rose-red and white with beautifully frilled petals.

Loveliness Fringed. Clear pink. Very double compact habit.

Rose-Carmine (World Beauty Pink Perfection). Fringed bright carmine flowers.

Pure White. A companion to Loveliness. This is one of the best double fringed white Petunias.

All-Double Dwarf Giant Fringed Mixed. The flowers are very large, exquisitely ruffled and fringed.

Price on the All-Double varieties: $\frac{1}{2}$ Tr. pkt. (500 seeds), \$1.25; 1 Tr. pkt. (1000 seeds), \$2.50.
